GEETHA PRIYA KANIKIREDDY

Atlanta, GA | 404-803-5632 | GeethaPriya.K@uga.edu | LinkedIn | GitHub

Professional Summary

Full Stack software engineer with 4 years shipping production software, strongest on the back end in Java, Spring Boot and Python. Designs REST APIs, microservices and data models, delivers the interfaces in React and TypeScript, and integrates LLM and RAG features into products. Owns work end to end, from requirements to production support.

Experience

University of Georgia **Aug 2025 - Present**

Software Engineering Intern *Athens, GA*

- Engineered Spring Boot REST APIs and microservices behind a platform 4 teams use daily, as the sole engineer.
- Architected the persistence layer in Hibernate and JPA over a 22-table data model, tuning entity mapping, fetch strategies and second level cache.
- Optimized database access by profiling slow query paths and reworking indexes, cutting repeated round trips out of the hot path.
- Delivered the React and TypeScript front end on top of those APIs, including the authoring and review screens users work in daily.
- Built 9 data pipelines feeding the services, with LLM extraction, schema validated output and a human approval step.
- Owned the full lifecycle: requirements from non-technical users, weekly releases on their feedback, and on call and end user support after launch.

CrimsonLogic Pvt. Ltd **Jan 2023 - Jul 2025**

Software Engineer *Bangalore, India*

- Engineered 30+ REST APIs and microservices in Java 8/11/17 and Spring Boot across 8 enterprise workflows.
- Optimized the Hibernate and JPA layer and second level cache by reading the generated SQL rather than trusting the abstraction, restoring low latency responses.
- Architected data models across PostgreSQL, SQL Server and MongoDB, tuning queries and indexes for throughput.
- Engineered event driven integration with Kafka and RabbitMQ, designing retry and recovery for failed messages.
- Hardened services with OAuth 2.0, JWT and Spring Security, covered by JUnit and Mockito unit and integration tests.
- Spearheaded delivery through Git, Maven, Jenkins and Docker onto AWS and Kubernetes, with Grafana and Splunk dashboards.
- Delivered the React, Angular and TypeScript front ends on top of the APIs, with Node.js and Express services behind them.
- Reviewed other engineers' code, mentored new joiners and carried production on call in an Agile team.

Projects

Forensic Triage Agent for Security Operations Centers | *Python, LangGraph, OpenAI API, RAG, MCP* **Jan 2026 - Present**

- Master's project: a multi-agent system that turns ambiguous security logs into prioritized directives, with tool use, structured outputs and a human approval gate.

Bitcoin Price Movement Prediction from Twitter Signals | *Python, Q-Learning, Machine Learning* **Jan 2023**

- Built end to end in Python: a Q-learning model trained on tweet engagement signals to predict short term price movement.

Education

University of Georgia **Aug 2025 - Dec 2026**

Master of Science in Computer Science, GPA 3.9/4.0 *Athens, GA*

Nagarjuna College of Engineering and Technology **Jun 2019 - May 2023**

Bachelor of Engineering in Computer Science *Bangalore, India*

Technical Skills

- **Languages:** Java 8/11/17, Python, SQL, TypeScript, JavaScript
- **Core Java and Frameworks:** Core Java, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, REST APIs, microservices
- **Concurrency and Design:** Multithreading, concurrency, ExecutorService, design patterns, SOLID principles
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, data modeling, query optimization, indexing
- **Messaging and Integration:** Kafka, RabbitMQ, event driven architecture, API integration, retry and failure recovery
- **Cloud and DevOps:** AWS (EC2, ECS, S3, Lambda), Docker, Kubernetes, Jenkins, Maven, CI/CD, Git, Grafana, Splunk
- **Testing and Practices:** JUnit, Mockito, unit and integration testing, code reviews, Agile, monitoring, on call, mentoring
- **AI and Frontend:** LLM integration, RAG, OpenAI API, structured outputs, React, TypeScript
