GEETHA PRIYA KANIKIREDDY

Software Engineer | Backend | Full Stack | AI/ML

Atlanta, GA | 404-803-5632 | GeethaPriya.K@uga.edu | LinkedIn | GitHub | Portfolio

Professional Summary

Software engineer who owns a feature from the data model to the screen to the alert that wakes someone at 2am. Four years shipping production software: REST APIs and microservices in Java, Python and Spring Boot, interfaces in React, Next.js and TypeScript, and LLM, RAG and agent features built with the evaluation harnesses that prove they work. Currently the sole engineer on a platform four teams depend on daily.

Experience

University of Georgia **Aug 2025 - Present**

Software Engineering Intern *Athens, GA*

- Engineered Spring Boot and Python REST APIs and microservices behind a platform 4 teams use daily, as the sole engineer, with a 22-table data model in Hibernate and JPA.
- Built 9 data pipelines with document ingestion, LLM extraction, schema validated output and a human approval gate before anything is written.
- Designed agent workflows in LangGraph with RAG retrieval and MCP tool use, and instrumented evaluation harnesses and LLM-as-judge scoring to measure every change.
- Delivered the React and TypeScript front end on those APIs and supported it in production.
- Ran A/B tests and analyzed usage data after release, and built the dashboards showing what changed.

CrimsonLogic Pvt. Ltd **Aug 2022 - Jul 2025**

Software Engineer *Bangalore, India*

- Engineered 30+ REST APIs and microservices in Java 8/11/17 and Spring Boot across 8 enterprise workflows, with React, Angular and TypeScript front ends on top of them.
- Architected data models across PostgreSQL, SQL Server and MongoDB, with Kafka and RabbitMQ integration.
- Spearheaded delivery through Git, Maven, Jenkins and Docker onto AWS and Kubernetes.
- Reviewed code, mentored new joiners and worked to SOC 2 and FedRAMP requirements in an Agile team of 6.

Projects

Forensic Triage Agent for Security Operations Centers | *Python, LangGraph, RAG, MCP, OpenAI API* **Jan 2026 - Present**

- Master's project: a multi-agent system turning ambiguous machine logs into prioritized, human-approved directives, scored by an evaluation harness against labeled cases.

Bitcoin Price Movement Prediction from Twitter Signals | *Python, Q-Learning, Machine Learning* **Jan 2023**

- Trained a Q-learning model on tweet engagement signals to predict short term price movement, built end to end in Python.

Technical Skills

- **Languages:** Java 8/11/17, Python, JavaScript, TypeScript, C#, SQL, Go
- **Frontend:** React, Next.js, Angular, Vue.js, HTML, CSS, Tailwind CSS, GraphQL, responsive UI, component design
- **Backend:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, FastAPI, Node.js, Express, .NET, REST APIs, microservices, OAuth 2.0, JWT, concurrency, design patterns
- **AI and ML:** LLM integration, RAG, LangGraph, LangChain, CrewAI, MCP, vector databases, embeddings, prompt engineering, structured outputs, evaluation harnesses, LLM-as-judge, OpenAI and Claude APIs, AWS Bedrock, machine learning, Q-learning, GitHub Copilot, Cursor, Claude Code
- **Data and Cloud:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Kafka, RabbitMQ, data modeling, query optimization, data pipelines, Snowflake, AWS (EC2, ECS, S3, Lambda, Bedrock), GCP, Azure, Docker, Kubernetes
- **DevOps and Practices:** Jenkins, Maven, GitHub Actions, CI/CD, Git, Linux, Grafana, Splunk, JUnit, Mockito, PyTest, unit, integration and end-to-end testing, Agile and Scrum, code reviews, mentoring, on-call, A/B testing

Education

University of Georgia **Aug 2025 - Dec 2026**

Master of Science in Computer Science, GPA 3.9/4.0 *Athens, GA*

Nagarjuna College of Engineering and Technology **Jun 2019 - May 2023**

Bachelor of Engineering in Computer Science *Bangalore, India*
